Daughter gets dad his due | www.thejewishadvocate.com | Jewish Advocate

"As soon as I introduced myself, she said your dad's letter to Dr. Compton regarding iodine, and that seminal question, was so critical," Hertz recalled.

* Hertz will be honored Jan. 23 at 7 p.m. at Harvard Medical School's Vanderbilt Hall, 107 Avenue Louis Pasteur, Boston.

Dear Barbara,

I just wanted to say that you did an excellent job with your father's tribute! I really enjoyed learning about the history of how your father developed RAI as a treatment for hyperthyroidism and the first (and best) targeted cancer therapy. The work that your father did was truly paradigm-shifting and ground-breaking, and it was so great to see all the letters and articles you had collected showing the impact through the years. It was also nice to hear from Dr. Garber and Dr. Braverman to reflect on how far we have come.

Thanks for inviting the fellows!
